

Steamers "TAIREA" & "TAKLIWA".

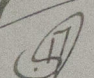

The Builders desire to know whether in the light of later experience the fitting of any additional stiffening is recommended to the deep oil fuel bunkers.

The stresses of the different members forming the stiffening in the oil fuel bunkers have been calculated, and it is found that they are nowhere excessive.

The experience obtained in service with deep oil fuel bunkers in which the structural members are arranged as in these vessels has not ^{too far} indicated that any additional stiffening is necessary.
