

"AMERSKERK"Rpt. Ams. No. 16005.

This complete superstructure vessel with tonnage opening has been constructed during the German occupation of Holland under the supervision of the Society's Surveyors and in accordance with approved plans with a view to classification, but does not appear to have been completed before being seized by the Germans.

As it is now reported that she has been sunk it is submitted that no further action will be necessary.

It is submitted the Surveyors be requested to furnish particulars of the requirements which remained to complete the Special Survey including those of Section 20 of the Rules when the vessel was seized by the Germans.
