

Lloyd's Register of Shipping
COPY.

"BULKOIL" ex "DANIEL WEBSTER".

This vessel was originally built as a cargo steamer
and was classed 100A1 Shelter deck with freeboard.

The vessel has now been converted into a tanker
and the New York Committee have assigned the class 100A1
Carrying petroleum in bulk etc.,

Freeboard therefore is not a condition of class,
but it would appear that a tanker freeboard of 7'-0" has
been assigned.

It is submitted the New York Office be requested
to state if Convention tanker freeboards have been assigned
by them to this vessel and if so they should forward the
usual particulars and copy of certificate in order that
the necessary records may be made in the Register Book.
