

S. S. <sup>s</sup> "DESDEMONA" and "DELIA"

It is submitted the Glasgow Office be informed by wire, as desired, that in the "DELIA" the Surveyors were requested to satisfy themselves that adequate strengthening in the form of doublings or plating of increased thickness, was provided at the bridge end. They subsequently reported that no such strengthening was fitted, but that the Owners had arranged to provide the required strengthening at the first opportunity.

The Glasgow Office should <sup>be</sup> also informed it is considered that, as required by the Rules, additional strengthening should be provided at the bridge end.

A copy of the Scantling Sheet and of the correspondence relating to the Classification of the "DELIA" should be forwarded to the Glasgow Office for their information.
