

RD REPORT on the *s/s Leo*

It is submitted the Surveyor be informed that the closing appliances for the openings in bridge front shown on the sketch forwarded, fall under Class B, and if retained will require increased freeboard.

The freeboards are assigned subject to Class A closing appliances being fitted, viz shifting boards in channels riveted to the bulkhead full height of the openings.

If instead of Class A temporary closing appliances the openings are closed by steel doors permanently secured to the bulkhead plating by riveted hinges, the freeboard assigned could be reduced three inches.
