

REPORT on the *sh* No 973 & 974 Armstrong Whitworth & Co

It is submitted the freeboards given on the accompanying form being those required by the Tables merit approval, subject to the particulars and dimensions now supplied being verified on completion and the poop front being closed as required for full allowance.

It is understood from the Builders list of particulars that the bridge is to be closed at fore end and open at after end and the freeboard is computed accordingly. If the bridge were closed at both ends as required for full allowance the summer freeboard would be $2\frac{1}{2}$ ins less

On completion see
British Colonel (Laird)
