

S.S. "BARON LOVAT".

Ex German Steamer "WOLFSBURG".

It is submitted that provided the arrangements be as shewn on plan and otherwise in accordance with the requirements of the Rules, the pumping arrangements of this vessel might be approved.

It is noted that the after peak is not a ballast tank and that a donkey pump separate bilge suction is fitted in the engine room.

It is concluded that provision is made for draining the fore peak tank top flat, if same is below the load water line.

The Falmouth Surveyors should be advised accordingly.

Return 1 plan.
