State dimensions of freeing port area on back of this form.
The Surveyor should state whether the fall in sheer as reported is measured relatively to the straight line of keel or to the water line. If measured relatively to water line the vessel's draft at time of marking used should be reported forward and aft should be reported.

RECEIVED 818135 RECEIVED 13 SEP 1924 MARKING REPORT (P.T.O.)

If the frames, skin planking, or ceiling are of unusual thickness the breadth of vessel to inside of ceiling should be reported if possible.
The height of the R.Q.D. is to be taken from the level of the top of the amidship beam.
In three-decked vessels the total standard mean sheer means the sheer measured at the stem and stern-post. In vessels having poops and forecastles, it means the sheer measured at points distant one eighth of the vessel's length from stem and stern-post.
