

23 NOV 1935

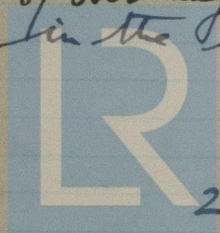

Greenock, 22nd November, 1935.

BOARD REPORT on the *Mason*. Liffours Ltd. Yard No. 886.

It is submitted the Greenock Surveyors be advised that as it is understood that it is very important to obtain a certain draught in the case of the above vessel, they should forward full particulars for an accurate preliminary forward assignment.

These should include the coefficient of fineness at 85% of the moulded depth, the sheer at each one-sixth of the vessel's length, the camber, the length of the erections, with details of overhang (if any) & details (with dimensions of any recesses) in the forebulkhead of the erections.
