EEBOARD REPORT on the

Motor Ship "Cabo Palos"

It is submitted the Bilbao Surveyors be informed that it has been assumed ~~that~~ the length on the loadline between the fore side of the stem and the after side of the sternpost is 394' 0", but they should confirm this.

The registered dimensions given on the Surveyors report appear to be the moulded dimensions of the ship and it is further submitted the Surveyors be requested to verify their figures.

They should be reminded that the drop in tank (if any) and particulars of sparring should be reported in all cases together with the builders name and yard number.
