Motor Vessel "GROSHOLM"

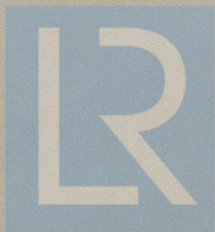

The Oslo Surveyors state that Messrs. Moss Vaerft
the Repairers of the vessel
& Dokk A/S propose to fit in this vessel a boiler,
intended to be used as a donkey boiler, which has
been taken out of the s.s. "Dania", now broken up.

IT IS SUBMITTED the Oslo Surveyors be informed
that there is no plan of the donkey boiler of the
s.s. "Dania" in this Office. The boiler is of Cochran
type, was made in 1902 under the supervision of the
Bureau Veritas and was fitted in the above vessel in
March, 1920.

It is concluded that it is the donkey boiler
it is proposed to fit in the M.V. "GROSHOLM", but, in
the event of the main boiler of the Steamer "DANIA" being
fitted, a plan of this boiler can be furnished.
