

Messrs. Deutsche Werft's Nos. 201-204.  
-----

Plan of oiltight transverse bulkheads shewing a proposal to arrange the seams of the plates within the longitudinal bulkheads horizontally submitted, in triplicate, by the Hamburg Surveyors.

It is submitted that provided the arrangements be carried out as shewn and to the Surveyors' satisfaction, the same will merit approval.

As these vessels are practically sister ships to the same Builders' No. 181 ("NUEVA GRANADA"), the plans of which are at present in the Hamburg Office, the Surveyors should be requested to forward in the case of future submissions of plans for the new vessels the corresponding approved plans of the "NUEVA GRANADA", for reference.

*P. 27.10.37  
And 5.11.37  
6 plans retained.*

*J.R.*
