

4  
S.S. "NAIMES" No. 66729 in the Register Book.

Six watertight bulkheads only are fitted in this vessel instead of seven as required by the Rules, suitable structural compensation in the form of increased strengthening to the side framing being provided.

It is submitted that, as in several previous cases, the omission of the bulkhead might be approved subject to the notation being made in the Register Book on the completion of the Survey as follows:-

"Intermediate bulkhead in the forward hold dispensed with. 6 B.H. only."
