

Additional

S.S. "ANGLO COLOMBIAN" EX "SCHWARZENFELS"

This is a sister vessel to the S.S. "WEISSENFELS" and "TREDENHAM" ex "FALKENFELS" which received the consideration of the General Committee at their Meetings on the 25th November and 6th January last.

Six watertight bulkheads only are fitted in the vessel, instead of eight bulkheads as required by the Rules, suitable structural compensation in the form of web frames being arranged for.

It is submitted that as in the cases of the previous similar vessels above referred to, the omission of the two bulkheads might be approved, subject to a notation being made in the Register Book on the completion of the survey as follows:-

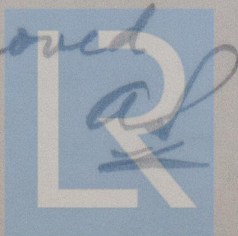

"Intermediate bulkhead in forward and in after holds
dispensed with; 6 B.H. only".
