

COPY.

23rd February, 1932.

Dear Mr. Herbert,

With reference to your enquiry regarding the sheers of the "BEIGENLAND", these should be measured in all cases in relation to the actual moulded depth amidships and not in relation to the lowest point of sheer.

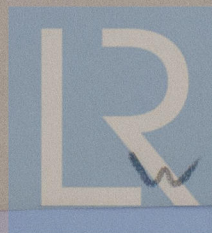

The 3" drop in sheer abaft amidships will affect the sheer at 2/6ths length from aft, and therefore will apply its own correction approximately.

With kind regards,

Yours faithfully,

G.O. Herbert, Esq.,
