

.....
these vessels were surveyed at Barcelona at the beginning
M.V. "CIUDAD DE BARCELONA" and "CIUDAD DE PALMA"
.....

It is submitted the Barcelona Surveyor be advised that from the sketch forwarded with his letter of the 2nd instant, it would appear that the lowest sidelights of non-underwater pattern on the above vessels are those marked B and G and that the heights of the sill of these sidelights above the top of the vessels keels are $19' - 0\frac{1}{2}"$ and $19' - 4"$ respectively. He should carefully verify these heights and advise this Office, as, if they are correct, the freeboard which could be assigned viz:- 2934 mm. is 4" greater than the freeboard assigned when the vessel was built.
