* If the frames, skin planking, or ceiling are of unusual thickness the breadth of vessel to inside of ceiling should be taken.

† In vessels obtaining an allowance for deck erections under Para. 11 where the steel propellant amidships the height of the R.Q.D. is to be taken from the level of the top of the amidships beam.

§ In flush-decked vessels the total standard mean sheer means the sheer measured at the stem and stern post. In vessels having poops and forecastles, it means the sheer measured at point distant one-eighth of the vessel's length from stem and stern-post.

† State dimensions of freeing port area on back of this form.

The Surveyor should state whether the fall in sheer as reported is measured relatively to the straight line of keel or to the water line. If measured relatively to water line the vessel's draft at time of survey, and also the usual load draft forward and aft should be reported.
