No. of Bilge Injections 1 sizes  $3\frac{1}{2}$  Connected to condenser, or to circulating pump <sup>Calculated</sup> Is a separate Donkey Suction fitted in Engine room & size Yes  $2\frac{5}{8}$ "

Are all the bilge suction pipes fitted with roses Yes Are the roses in Engine room always accessible Yes Are the sluices on Engine room bulkheads always accessible None

Are all connections with the sea direct on the skin of the ship Yes Are they Valves or Cocks Valves and cocks

Are they fixed sufficiently high on the ship's side to be seen without lifting the stowhold plates Yes Are the Discharge Pipes above or below the deep water line above

Are they each fitted with a Discharge Valve always accessible on the plating of the vessel Yes Are the Blow Off' Cocks fitted with a spigot and brass covering plate Yes

That pipes are carried through the bunkers <sup>timbers</sup> How are they protected by ceiling

Are all Pipes, Cocks, Valves, and Pumps in connection with the machinery and all boiler mountings accessible at all times Yes

Are the Bilge Suction Pipes, Cocks, and Valves arranged so as to prevent any communication between the sea and the bilges Yes

Is the Screw Shaft Tunnel watertight None fitted Is it fitted with a watertight door <sup>Engines Aft</sup> worked from

Is this machinery duplicate of a previous case ✓ If so, state name of vessel ✓

General Remarks (State quality of workmanship, opinions as to class, &c.)

The Machinery of this vessel (recently classed in Germanischer Lloyd) also the Boiler has been opened up and examined—see repair report attached—and found in good condition. The workmanship and material appears good. The furnaces show no signs of strain. In my opinion the Boilers and Machinery merits the favourable consideration of the Committee for record in the Register Book of L.M.C. 7. 21. Screw shaft seen 7. 21 Pressure 185 lbs.

2 plans of the pumping arrangement is forwarded herewith.
