

REPORT ON ELECTRIC FITTINGS

(OTHER THAN FOR THE PROPULSION OF THE VESSEL)

TUE. 31 JUL. 1923

Received at London Office

Date of writing Report

19

When handed in at Local Office 30.4.1923

Port of Middlesbrough

No. in Reg. Book.

Survey held at Haverston Hill-on-Tees on the S.S. "La Crescenta"

Date, First Survey mobile

Last Survey building 19

(Number of Visits)

Built at Haverston Hill-on-Tees by whom built Furness S/S Co Ltd Yard No. 8 When built 1923

Owners Crescent Navigation Co Ltd Port belonging to London

Electric Light Installation fitted by Messrs Furness Shipbuilding Co Ltd Contract No. When fitted 1923

System of Distribution Double Wire Insulated

Pressure of supply for Lighting 100 volts, Heating _____, Power _____

Direct or Alternating Current, Lighting Direct Power _____

If alternating current system, state frequency of periods per second _____

Has the **Automatic Governor** been tested and found efficient when the whole load is suddenly thrown on or off yes

Generators, do they comply with the requirements regarding overload yes, are they compound wound yes

are they over compounded 5 per cent. Level, if not compound wound state distance between each generator _____

Where more than one generator is fitted are they arranged to run in parallel _____, is an adjustable regulating resistance fitted in series with each shunt field _____

Are all terminals accessible and clearly marked yes, are they so spaced or shielded that they cannot be accidentally earthed, or short circuited _____

Are the lubricating arrangements of the generators as per Rule yes

Position of Generators after end Engine Room

is the ventilation in way of the generators satisfactory yes, are they clear of all inflammable material yes

if situated near unprotected woodwork or other combustible material, state distance of same horizontally from or vertically above the generators _____ and _____, are the generators protected from mechanical injury and damage from water, steam or oil yes

are their axis of rotation fore and aft yes

Earthing, are the heliplates and frames of the generating plant efficiently earthed yes, are the prime movers _____ their respective generators in metallic contact yes

Main Switch Boards, where placed Near Generator in Engine Room

If the generators and main switchboard are not placed in the same compartment, is each generator provided with a fuse on each insulated pole as near as possible to the terminals of the generator, additional to that provided on the main switchboard _____

Switchboards, are they placed in accessible positions, free from inflammable gases and acid fumes yes

are they protected from mechanical injury and damage from water, steam or oil yes, is situated near unprotected woodwork or other combustible material, state distance of same horizontally from or vertically above the switchboards _____ and _____

are they constructed wholly of durable, incombustible non-absorbent materials yes, is all insulation of high dielectric strength and of permanently high insulation resistance yes, if semi-insulating material is used, are all conducting parts connected to one pole insulated from the slab with mica or micaite and the slab similarly insulated from its framework yes, and is the frame effectively earthed Not Earthed

Are the following fittings as per Rule, viz.:— spacing or shielding of live parts yes, accessibility of all parts yes, absence of fuses on back of board yes, proportion of circuit bars yes, individual fuses to voltmeter, pilot or earth lamp yes, connections of switches yes

Main Switchgear, description of switchgear for each generator and each outgoing circuit, and arrangement of _____ switches

D.P. Switches & Fuses for Generator, and each outgoing feeder circuit (Fuses) porcelain H.O. Pattern

Instruments on main switchboard one ammeter, one voltmeter, _____ synchronising device for paralleling purposes.

Earth Testing, state what means are provided at the main switchboard for indicating the state of the insulation of the system Two 16 c.p. lamps in series & middle point earthed, connected to each Bar Bar by means of switch & fuse

Switches, Circuit Breakers and Fusible Cut-outs, do these comply with the requirements of the Rules yes

Section and Distribution Boards, is the construction, protection, insulation, material, and position of these as per rule yes

© 2019 Lloyd's Register Foundation

San Antonio

Insulation of Cables, state type of cables, single or twin. *Single Twin* are the cables insulated and protected as per Tables III or IV of the Rules *Table III*

Fall of Pressure, state maximum between bus bars and any point of the installation under maximum load. *5 Volts*

Cable Sockets and other connections, are the ends of all cables having a sectional area of 0.007 square inch and above provided with soldering sockets. *yes*

Paper Insulated Cables, If cables are paper covered, is the dielectric at the exposed ends of the conductor protected from moisture by being suitably sealed with insulating compound. *yes*

Cable Runs, are the cables fixed as far as possible in accessible positions not exposed to drip or accumulation of water or oil, or to high temperature from boilers, steam pipes, uptakes or other hot objects, or to avoidable risk of mechanical damage. *Main feeder cables are run along the underside of the Fore and Aft Gangway. All cables which are exposed, or where moisture is likely to accumulate are lead covered, armoured and braided.*

Support and Protection of Cables, state how the cables are supported and protected. *Lead covered & armoured cables are supported by means of galvanised iron clips. Lead covered cables supported by means of brass clips.* If cables are run in wood casings, are the casings and caps secured by screws. *are the cap screws of brass* are the cables run in separate grooves. *If armoured and lead covered cables are secured by metal clips, are the clips secured as per Table VI* *yes*

Refrigerated Chambers, if lights are fitted, are the cables and fittings in accordance with the special requirements.

Joints in Cables, state if any, and how made, insulated, and protected. *Porcelain junction boxes protected by cast iron covers.*

Watertight Glands and Deck Tubes, are all cables passing through decks and watertight bulkheads provided with deck tubes or watertight glands. *yes*

Bushes in Beams and Non-watertight Positions, where unarmoured cables pass through beams and non-watertight partitions, are the holes efficiently bushed. state the material of which the bushes are made. *lead*

Earthing Connections, state what earthing connections are fitted and their respective sectional areas. *none* are their connections made as per Rule.

Alternative Lighting, are the groups of lights in the propelling machinery space arranged as per Rule. *yes*

Emergency Supply, state position and method of control of the emergency supply and how the generator is driven.

Navigation Lamps, are these separately wired. *yes* controlled by separate switch and separate fuses. *yes* are the fuses double pole. *yes* are the switches and fuses grouped in a position accessible only to the officers on watch. *yes* has each navigation lamp an automatic indicator as per Rule. *yes* are separate screens provided for the use of oil and electric side lights. *yes* are separate oil lanterns provided for the mast head lights and side lights. *yes*

Fittings, are all fittings on weather decks, in stokeholds and engine rooms and wherever exposed to drip or condensed moisture, watertight. *yes* are any fittings placed in spaces in which goods are liable to be stacked in close proximity to them; if so, how are they protected. *Strong Hinged cast iron covers* are any fittings placed in spaces where inflammable or explosive dust or gases are liable to be present, if so, how are they protected. *Gas light fittings in Pump Room in No. 4 Conduit* how are the cables led. *Forecastle Dist. Board* where are the controlling switches situated.

Searchlight Lamps, No. of whether fixed or portable. are their fittings as per Rule.

Arc Lamps, other than searchlight lamps, No. of are their live parts insulated from the frame or case. are their fittings as per Rule.

Motors, are their working parts readily accessible. are the coils self-contained and readily removable for replacement. are the brushes, brush holders, terminals and lubricating arrangements as per Rule. are the motors placed in well-ventilated compartments in which inflammable gases cannot accumulate and clear of all inflammable material. are they protected from mechanical injury and damage from water, steam or oil. are their axis of rotation fore and aft. if situated near unprotected woodwork or other combustible material, are the motors of the totally enclosed, pipe ventilated, forced draught, drip or flame proof type. if not of this type, state distance of the combustible material horizontally or vertically above the motors. and.

Control Gear and Resistances, are the generator field and motor speed regulators, starters and controllers constructed as per Rule.

Lightning Conductors, where lightning conductors are required, are these fitted as per Rule. *yes*

Ships carrying Oil having a Flash Point less than 150 F. Have the special requirements of the Rules been complied with regarding switches, joint boxes, section and distribution boards, protection of cables, method of distribution, lead of cables, lights and fittings. *yes* If portable lamps for use in dangerous spaces are supplied, are they of a type approved by the Home Office. *yes*

All Conductors are of annealed copper conforming to British Standard Specification No. 7.
 The Insulated Conductors are guaranteed to withstand the immersion and resistance tests specified in the Rules.
 The foregoing is a correct description.

FURNESS SHIPBUILDING CO. LIMITED

P.S.G. Coon.

Electrical Engineers.

Date *27th July 1923*

COMPASSES.

Distance between electric generators or motors and standard compass *150 ft*

Distance between electric generators or motors and steering compass *150 ft*

The nearest cables to the compasses are as follows:—

A cable carrying *3* Amperes *Inside* feet from standard compass *5* feet from steering compass.

A cable carrying _____ Amperes _____ feet from standard compass _____ feet from steering compass.

A cable carrying _____ Amperes _____ feet from standard compass _____ feet from steering compass.

Have the compasses been adjusted with and without the electric installation at work at full power *yes*

Has the effect of switching on and off circuits, motors and other electro-magnetic apparatus within the vicinity of the compasses been noted *yes*

The maximum deviation due to electric currents was found to be *nil* degrees on *all* course in the case of the standard compass, and *nil* degrees on *all* course in the case of the steering compass.

FURNESS SHIPBUILDING CO. LIMITED,

Am. Orarie

Builder's Signature.

Date *27th July 23.*

Is this installation a duplicate of a previous case *yes* If so, state name of vessel *S.S. Liss Mdb. Ref. 1211073.*

General Remarks (State quality of workmanship, opinions as to class, &c.)

This installation has been fitted in accordance with the Rules, is of good materials and workmanship and on completion was examined under full working conditions and found satisfactory.

It is submitted that this vessel is eligible for THE RECORD. *elec light.*

W.A.
1873

Total Capacity of Generators *8.5* Kilowatts
