

T.S.S. "NARDANA".

This vessel is at present undergoing alterations at the Works of Messrs. Cox & Co., Falmouth.

The local Surveyor has forwarded for verification plans of stiffening of the tank top in way of the Bauer-Wach turbines, and new intercostals under the main engines.

The first mentioned plan has been verified, and found to be a copy of the one approved on the 29th November last.

With regard to the new intercostal girders under the main engines, it might be pointed out that this arrangement is similar to that recently fitted in the T.S.S. "NUDDA".
