

STEEL S.S. "MOGILEFF".

Nwc. 60765.

The hydraulic
This vessel's Engines and Boilers were built in 1907 the date of test of the Boilers being June 21st 1907, but they were not fitted on board at that time. They were under survey on six dates in 1908 and once in 1909. They have been opened up and examined before they were fitted *on board* this year, and the Newcastle Surveyors are of the opinion that the machinery may be considered as being new at this time.

The survey on the Hull was commenced in September 1907 but the vessel was not launched until May last so that the date of build of the vessel would be recorded as July 1911 that being the last date of survey.

It is submitted that in the circumstances the vessel is now eligible for the record *LMC* 7,11, and that the date of build of the Engines and Boilers should be recorded as 1911.
