WOOD SCREW STEAMER "WAR SOREL" built by Messrs. The
Quebec Shipbuilding & Repairing Co., at Quebec, P.Q.

The First Entry Report for this vessel
has now been received and it is noticed that the dimensions
of the vessel, as built, are slightly modified from those
shewn on the approved plans.

As the increase in the dimensions changes the
tonnage grade, the scantlings and arrangements have been
compared with the Rules for the increase of tonnage and it
is found that these can be accepted.

It is submitted that the scantlings and
arrangements as shewn on the report be approved as in the
case of the Sister Vessel "WAR QUEBEC" built by the same
firm, dealt with on the 20th December last.
