

S.S. "PATAGONIER".

As in the case of the sister vessel "MENAPIER", approved this month, a new fore mast is to be fitted in this steamer, to support a 30 ton Derrick.

It is submitted the Antwerp Surveyors be informed, as in the case of the sister vessel above referred to, (see Secretary's letter of the 3rd instant) that, while the Committee of this Society do not take the responsibility of approving masts and gear for heavy loads, the plans submitted in this case have been examined, and certain modifications made to the scantlings which are considered desirable, and that with the arrangements as shown and amended it is considered that the mast will be suitable to carry the derrick in question, upon the assumption that the mast is supported by stays which are stout and efficient.
