

Steel Screw Steamers Nos. H3, I3 & K3 proposed to be built by  
the Chantiers de Normandie with a view to class 100A 1.

Dimensions ; 445 x 61.01 x 31.82 to Upper Deck  
41.07 to Bridge Deck

Displacement Numbers ; 92.83 & 41330

Portions ; Length = 13.99 Depths to Upper Deck  
10.84 Depths to Bridge Deck

Amended sketches of midship section in triplicate  
submitted by the Builders direct.

These vessels are of a length to require seven  
watertight bulkheads, but six watertight bulkheads only are  
proposed to be fitted, a watertight bulkhead in the forward  
end having been dispensed with.

The General Committee decided on the 4th ultimo that  
a special survey of the vessels during construction could be  
proceeded with, but that before the vessels were classed in  
the Society's Register Book it would be necessary for a  
letter from the Owners requesting the omission of the  
bulkheads to be furnished as requested by the terms of  
Circular No. 1238.

It is submitted the Builders be informed that  
in accordance with the decision of the Committee the special  
surveys of these vessels may be proceeded with, but that  
before they are finally classed in the Society's Register  
Book letters must be forwarded from the Owners desiring  
omission of the bulkheads in question in accordance with  
the terms of the Committee's Circular when a suitable  
arrangement will be made in the Register Book in respect of  
omission of the bulkheads.

It is submitted that provided

compliance

the vessels will be worthy to be classed 100A 1.

Steel Note.

The Builders should be informed that in consequence of the increased height of the combined bridge and poop tween decks the proportion of length to depth to the bridge and poop decks is now 10.84 instead of 11.26 as before, and consequently the scantlings of the sheerstrake and stringer might be reduced as indicated on the plans.
