

Messrs. Wm. Hamilton & Co.'s S.S. No. 232.

It would appear from the Surveyor's letter in regard to this case that an anchor attachment consisting of three long links has been supplied as for a $2\frac{1}{4}$ " cable, whereas the cable to which this attachment is to be fitted is $2\frac{5}{16}$ ". The Manufacturers, who admit that a mistake has been made, explain that the actual size of the attachment as supplied is $3\frac{14}{32}$ " whereas that which should have been supplied would have been $3\frac{15}{32}$ " in diameter.

In all the circumstances of the case, it is considered that the attachment supplied in this case may be approved and that the Greenock Surveyors should be informed accordingly.
