

D. & W Henderson's S.S.No.452.

It is proposed to dispense with the cement inside of the double bottom and to apply in lieu thereof a good coat of cement wash, similar to what was done in the case of the sister vessel "ASHBURTON", recently completed by the same Builders for the same Owners.

It is submitted that provided the outside strakes of shell plating and keel plate be cemented up flush with the inside strakes of plating the proposal might be approved subject to the condition of the bottom being periodically examined and reported upon by the Society's Surveyors, as approved in the case of the S.S."ASHBURTON", the sister vessel referred to.
